OBJECT ORIENTED PROGRAMMING WITH JAVA LAB (BCAC592)

INDEX				
Name:		Stream:		
University Roll No:		Sem/Year:		
University Reg. No:				
Sl No	Lab Exercises	Date	Page No	Signature
1.	Input n numbers on Command Line Argument and calculate maximum of them.			
2.	To print sum and average of even and odd numbers separately given on Command Line Argument.			
3.	To add two Numbers			
4.	To check whether a year is Leap Year or not.			
5.	Multiply a number by 4 and divide the same number by 2 using shift operator.			
6.	Swap two numbers Without using any arithmetic operator.			
7.	Convert long to int.			
8.	Find the ASCII value of a Character.			
9.	To check whether a number is a perfect number or not.			
10.	To check Armstrong number.			
11.	To check whether a number is Prime or not.			
12.	write a program to demonstrate that String class is immutable whereas String Buffer and StringBuilder are mutable.			
13.	Write a program to check whether a string is a Palindrome or not			
14.	Write a program to count the occurrence of the given character in a string?			
15.	Write a program to count no of vowels and consonants from a String.			
16.	Write a program to print the area of a rectangle by creating a class named 'Area' having two methods. First method named as 'setDim' takes length and breadth of the rectangle as parameters and the second method named as 'getArea' returns the area of the rectangle. Length and breadth of the rectangle are entered through the keyboard.			
17.	Create a class named 'Student' with String variable 'name' and integer variable 'roll_no'. Assign the value of roll_no as '2' and that of name as "John" by creating an object of the class Student.			
18.	Write a java program to implement fixed size stack of integers.			
19.	Write a java program to overload three methods named with addition() having different parameters.

20.	Write a java program to overload three constructor named with Addition() having different parameters.			
21.	Search an element in the array using Linear Search.			
22.	Perform the following operation in matrix: Addition, Multiplication & Transpose			
23.	Write a program in java with class Employee and do the following operations on it : • Create two constructor default and with Object as parameter to Initialize class variables. • Create a function which calculates the pf and allowances. • on the salary of the employee and return all values as an object. • Print all the employee object associated values returned from calculate functions			
24.	Create a person inherit two classes from it politician & sportsman provide constructors & calculate salary & display functions. Create a abstract class employee, having its properties & abstract function for calculating net salary and displaying the information. Drive manager & clerk class from this abstract class & implement the abstract method net salary and override the display method.			
25.	Implement throw and throws in exception handling in java.			
26.	Implement try-catch-finally in exception handling in java.			
27.	Implementation of multithreading using Thread class.			
28.	Implementation of multithreading using Runnable interface.			
29.	Create simple window using swing in java.			
30.	Create an applet to find maximum of 3 numbers taking input from user.			
31.	Create simple applet using swing to add two number using text box and label box.			
32.	Implementation of data base connectivity in java.
